Samer Khatib

samerkhatib.com (630) 649-9306 skhatib07@outlook.com

EDUCATION

University of Florida Gainesville, FL

B.S. in Computer Engineering

B.S. in Finance Expected Graduation: May 2024

Involvement: Association for Computing Machinery

Competitive Programming Club, Solar Gators, Software Engineering Club

SKILLS

Languages: JavaScript / TypeScript, HTML5, CSS3, Python, Dart, Go, Java, C++

Tools: Flutter, React, Angular, Git, Docker, Kubernetes, AWS, npm, pip

EXPERIENCE

Cisco Meraki - Full Stack Software Engineering Intern - vMX Team

May 2022 – August 2022

- Created an internal *command-line tool* in **Go** to access the Meraki Dashboard & execute **CRUD operations** on user-managed organizations, networks, & devices
- Developed a **Go Package** to format the output of the command-line tool to optionally output in an **ASCII Tabular format** or serialized JSON
- Designed & Built a Hashicorp Terraform Provider to access the Meraki Dashboard using the Terraform Plugin Framework to simplify the deployment of vMX Devices

University of Florida Solar Gators - Telemetry Lead

March 2021 - February 2022

- Developed web application (JavaScript) to retrieve telemetry data from vehicle such as GPS location & velocity
- Displayed contents of retrieved data in real-time on dynamic map using Google Map's JavaScript API
- Cached collected telemetry data from each run in MySQL database using Node.js framework module
- Teach team members how to contribute to development using Git Version Control & ClickUp Task Control

DigiConnect LLC. – Software Engineering Intern – Front End Infrastructure

May 2021 - August 2021

- Launched native third-party client application for several social networking sites using Swift (iOS) & Java (Android)
- Migrated native application code base into a shared language (Dart) using Google's Flutter Software Development Kit
- Overhauled Website UI using React for graphical adjustments with a data pipeline built on Apache Spark & Firebase

PROJECTS @ (www.github.com/skhatib07)

VaccinApp - COVID-19 Vaccine Site Locator

C++, Python, JavaScript

- Finds nearest vaccine locations to the user using the user's current GPS coordinates & displays them on a map
- Retrieves vaccination site metadata from The Socrata Open Data API & current location from the HTML Geolocation API
- Collects historical data on previous vaccination queries in JSON format, sorting the data using a PostgreSQL table

YOLO-ALPR - Automatic License Plate Detection & Recognition

Python, C++, pip

- Detects & isolates a vehicle & vehicle's license plate in a live video stream using Ultralytics YOLOv5 architecture
- Analyzes detected vehicle to identify physical characteristics of the vehicle (color, make, model)
- Reads & saves license plate number using Google's Tesseract optical character recognition (OCR) engine
- Stores image of vehicle in an Amazon AWS S3 container & identified information in an SQLite database

Myoelectrics - Natural Robotic Hand & Actuation

Python, Java, C++

- Takes raw inputs from forearm muscles of user using 2 MyoWare electromyography (EMG) sensors
- Raw inputs are passed through & filtered using Weka3's Sequential Minimal Optimization (SMO) regression
- Degree of finger actuation is classified after filtration using a Multi-Output Convolutional Neural Network with Keras API
- 3-D printed model of hand is actuated using 6 separate SG90 Micro-Servo Motors powered by 5 Volt 3 Amp Power Bank

AWARDS

Intel Excellence in Computer Science Award

March 2019, February 2020

Awarded to top student project in the Computer Science Category at the Florida State Science and Engineering Fair

Regeneron Science to Medicine Certificate of Recognition

March 2019
